# Agenda

**Objectives**

**Data Overview**

**Modeling**

**Recommendations**

**Future Insights**

# Objectives

# PRAMS Birth Preparedness Initiative

- USA infant mortality rate is 6 in 1000
- Build model to predict newborn health
- Determine best ways to improve infant health outcomes

# APGAR Score

## APGAR SCORES EXPLAINED

Indicator		0 Points	1 Point	2 Points
A	Appearance (skin color)	Blue; Pale	Pink Body; Blue Extremities	Pink
P	Pulse	Absent	Below 100 bpm	Over 100 bpm
G	Grimace (reflex irritability)	Floppy	Minimal Response to Stimulation	Prompt Response to Stimulation
A	Activity (muscle tone)	Absent	Flexed Arms and Legs	Active
R	Respiration	Absent	Slow and Irregular	Vigorous Cry

# Bottom Line

- Model Identified 6 in 10 At-Risk Newborns
- Second trimester exam
- Launch prenatal care program

# Data Overview

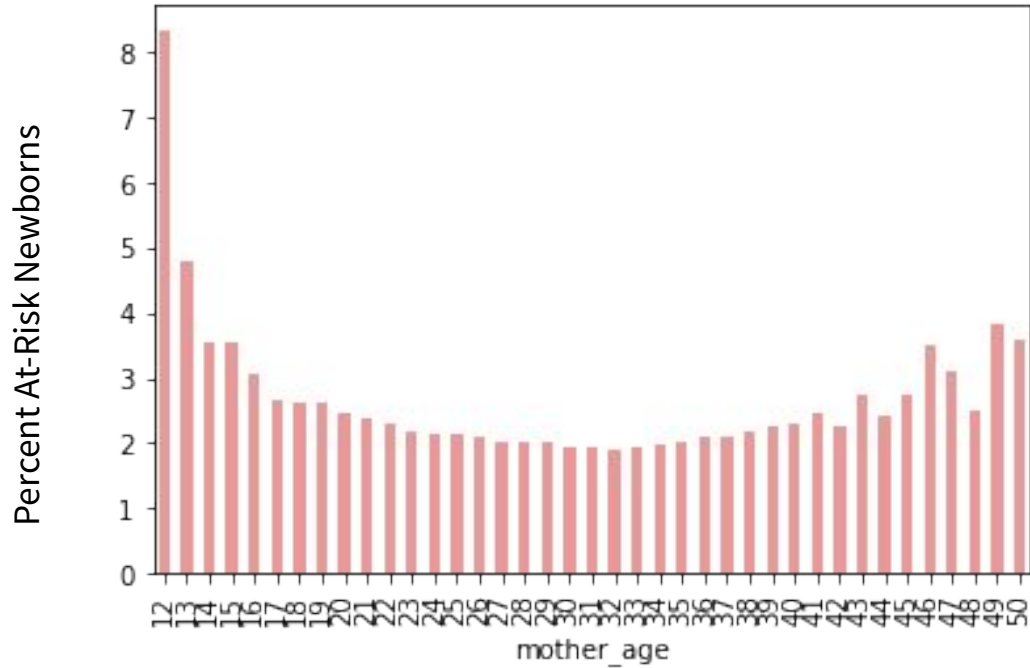

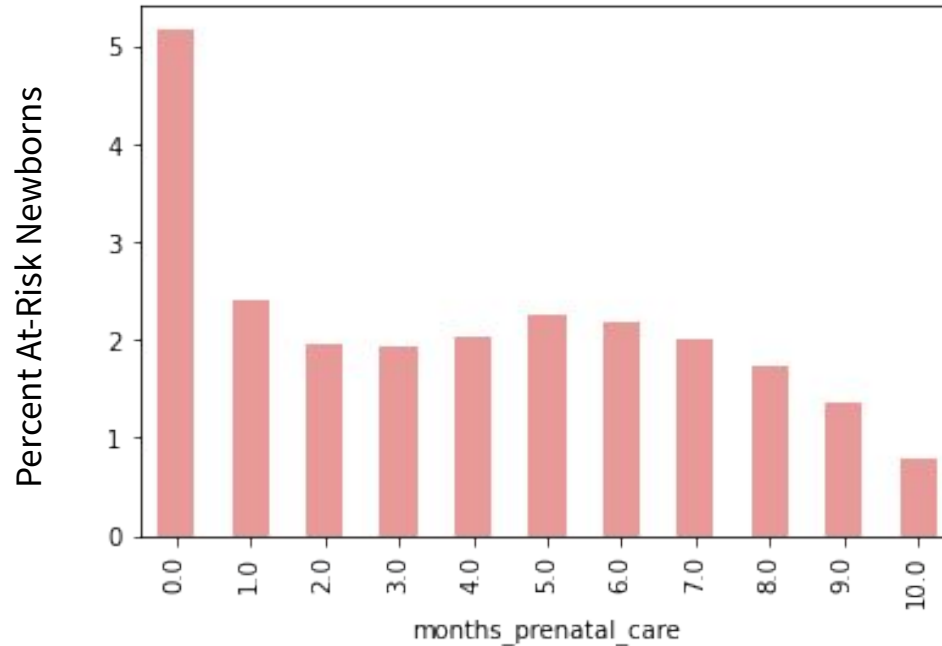

# Data: National Center for Health Statistics

- 20,000 births
- Sampled from over 3 million in USA 2019
- 2% of newborns have a low APGAR Score

# Mothers Aged 17 - 40 Had Healthier Newborns

# Three Months of Prenatal Care Significantly Improves Newborn Outcomes

# Modeling

**Best model Identified 6 in 10 At-Risk Newborns**

# Recommendations

# Model Deployment

- Model Identified 6 in 10 At-Risk Newborns
- Second trimester exam
- Launch prenatal care program

# Future Insights

- Other countries
- Compare resampling methods
- Different models for each milestone of pregnancy
